

# Circulation Pumps

At **Campion Mechanical & Electrical Engineering** we stock domestic circulators for heating installations, boilers and underfloor heating systems.

- A range of heads to choose from with a choice of fixed or variable speed settings.
- Simplified cable entry with push-fit connections.
- Light, compact design.
- Low noise level

Our in-line centrifugal range includes models ranging from glandless variable speed, glandless and glanded pumps.

The units are suited for many applications including heating, air conditioning systems and hot water supply.

The range currently available includes pumps from 1" to 6" discharge size.

We supply wet rotor in-line circulators for residential, sanitary hot water circulation, commercial applications and for handling hot and cold moderately aggressive liquids.

Specifications range from 4m<sup>3</sup> per hour to 190,000m<sup>3</sup> per hour.
