

#### Rain Water Harvester

The rain water harvester collects rain water and stores it in an underground tank, offering you water supply throughout the house.

## Domestic Household Applications

We offer 2 choices in waste water treatment tanks, fiberglass tanks and pre-cast concrete tanks.

Both choices are:

IAB - Agreement certified.  
ISO 9001 : 2000 certified.

Both treatment systems are:

- Easy to install.
- Easily de-sludged.
- Low running costs

#### Why consider one?

- Natural source of soft water.
- Can reduce consumption of main water (by up to 50%)
- Reduces corrosion on household appliances as water is soft and chlorine free.
- Ideal natural source of garden watering.

#### Plumbing:

When building a new house we recommend you ask your plumber to plumb your house for a rain water system even if you do not intend at this point to purchase one. This will not cost much extra but could save you thousands in the future. To discuss this or any other option please give us a call.

*And remember water may not always be free!*
