

Fountain Pumps

● *Fountain ready to be installed.*

The fountain is fabricated back in our workshop and is completely ready when it goes out on site, just to be installed.

We have our own equipment to transport the fountain to your site and also to install the fountain.

Campion Mechanical & Electrical Engineering

manufacture and install water fountains to customer specifications from high quality Stainless Steel materials. We have installed water fountains in many well known sites nationwide.

● *Campion M&E engineers installing fountain.*

● *The End Result, by night.*

Our range of fountain pumps can satisfy from the smallest water garden features, like cascading features, right up to 35metre, high rise fountains.

While on site, our engineers, who are fully qualified can wire the equipment needed and give a demonstration to whoever the operator, is on how to use it.

We can also set up and wire flood lights around the fountain to make your fountain even more magnificent by night.

Our pumps are used to power fountains in places like The K Club; The Heritage Hotel and Leisure Club, Portlaoise; UCD and AIB headquarters in Dublin.

The feature shown on the left is the largest fountain to be found in the UK. That fountain has a Lowara pump powering it, identical to the pumps we use here at **Campion M&E**.
