

High Pressure Power Washers

Campion Mechanical & Electrical Engineering's selection of power washers are recognisable by their extraordinary high quality, modern design, long service life and their high efficiency. Our range consists of power washers that are suited to washing small cars to bigger, more powerful units used in industrial situations.

Features:

- Integrated hose drum.
- Delayed motor cut-out.
- Safety cut-out.
- Float valve to control water inlet.
- Provides hot or cold water.

Technical advantages of Campion's range:

- Stainless Steel micrometer.
- Adjustable pressure control.
- Brass pump head.
- Valve sets made of Stainless Steel

Environmental protection is an important issue here at **Campion Mechanical & Electrical Engineering**, so with our power washers the available pressure is optimally adapted to the flow rate of the water, thus effectively reducing the overall consumption of water and energy, but still giving maximum cleaning effect.

The picture to the right is a fully automated power washer unit. This is manufactured by **Campion Mechanical & Electrical Engineering**, using high quality Stainless Steel. The system will automatically stop/start based on the position of the hose reel valve. There is also a built in loss of water system to protect the pump in the event of incoming water failure. This system is ideal as a wash-down storage unit for farms and factories or waste water plants.

At Campion Mechanical & Electrical Engineering we have a dedicated after-sales team to assist with service and repair.
