Ritz Carlton - Powerscourt

Campion Mechanical & Electrical Engineering was awarded the main surface pump contract for this, the **first 6 Star hotel in Ireland**. This contract involved all the hotel and leisure centre circulating pumps plus the mains water booster sets. We were selected for our excellent delivery times of Irish manufactured systems and for the use of the Hydrovar variable speed drive system to save energy on the circulating pump systems.

High Flow Pumps

We also supplied a high volume water pumps to feed the wood pellet heating system. Each pump can supply water at over 145 litres per second to the system.

Hydrovar – The Smart Choice !

The using of the Hydrovar variable speed drive for both the circulating pumps and booster stations will result in Hugh energy savings for the client. The system is both easy to use and maintain, with no computers or expensive engineers required. The system as a built in PLC which automates the entire pumping process.
