

# Sewage Treatment Systems

At **Campion Mechanical & Electrical Engineering** we offer a wide range of Waste Water Treatment solutions and can cater for any application from a single house domestic unit right through to the most complex municipal requirement.

This is a view of a treatment system designed for a primary school with a population of 360 that we have installed. This would be similar to projects we have completed for hotels, housing estates and sports clubs throughout the country.

We offer Treatment Systems in both Pre-cast and Fibreglass materials.

They range in size from single house domestic right up to systems that cater for schools, housing estates, hospitals, sports clubs and both industrial and retail parks.

- Our systems are fitted completely underground
- Low running cost
- ISO & Irish Agreement Board approved

**Campion Mechanical & Electrical Engineering** are delighted to offer a full site specific assessment to our customers. Once we have a qualified engineers report we can provide all of the necessary paperwork required in relation to wastewater treatment planning issues.
