

Well Testing

At **Campion Mechanical & Electrical Engineering** we can offer a fully automated Bore hole yield & quality testing service.

Step 1: If required we can organize to have a new well drilled on your site.

Step 2: Our highly trained crew can install a hired pump of any size or power with our own lifting equipment.

Step 3: We insert an electronic measuring probe into the well and place an electronic flow metre on the outlet which gives an accurate flow rate reading in real time to the user.

Step 4: We fit a flow regulating valve on the line and run discharge piping to a nearby disposal location.

Testing Services:

Supply, setup and Installation of:
Pumping Equipment
Generator Hire (if required)
Level & Flow Monitoring
GSM Based logging system.

Types of Tests:

Flow Step tests
72hr Pump run tests.
7 day Pump run tests.
More if required.....

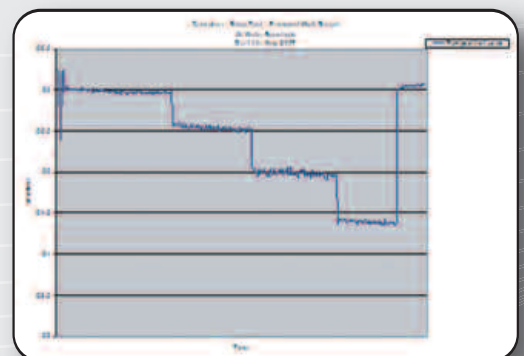

Why are we different ?

- Fully computerised level / flow readings.
- Online via GSM back to main office.
- Our own Pump Installation Equipment.
- Highly trained field crew.
- Range of Pumps to suit all requirements.
- Our own generator hire and fuelling service.
- All reports in Microsoft excel format.
- Our own water testing service.

After the Test:

- ✓ Full report and recommendations for your development.
- ✓ Option to purchase hired pump if required.
- ✓ Full design and quotation for proposed development

- Full graphs with all reports.

To discuss your requirements further please do not hesitate to give us a call !
